How to remove the sunshade on an A2 with OpenSky System (instructions and photos by german forum member A2TDI (Thomas), translation by frido)

1. Open the roof. Then close the sunshade. When viewed from the outside, you can see 2 fittings left and right.

2. These fittings can be removed from the track quite easily. Now you can remove the front part of the sunshade.
3. Now you have to remove the frame with the rear sunshade. The frame is a T-Profile and only clipped in.
4. Take a screwdriver and wrap a rag around it. Then push it gently onto the frame from the inside give it a healthy tap and you should be able to push it outwards. It is clipped into 6 clips along the length of the car and 4 clips along the width. This is what the profile of the frame looks like.

5. The frame is then resting between the glass and the car's roof and can be pushed outside through the open roof. This is what it looks like:

...and with the roof open:
